Ultra-flat line array element

**Vyper-KV52**

**Vyper-KV52W**

## DESCRIPTION

The Vyper-KV52 is an ultra-flat passive speaker system comprised of eight 1" neodymium magnet transducers housed in an elegant yet sturdy aluminum chassis. The eight closely-spaced cone drivers provide true line array characteristics: phase coherence, low distortion and focused listening in both the near field and at a distance from the speaker. A steel bracket accessory provides an option to mount wall

application for permanent installations. For easier use and integration with other speakers or amplifiers, the Vyper allows the user to select two different values of impedance (16Ω – 64Ω). At 64Ω as many as 16 Vypers can be powered off a single amplifier channel at 4Ω, which eliminates the need of 70 V amplifiers for wider distributed installed systems. The Vyper is able to reproduce the

whole vocal frequency range with high intelligibility, starting from 150 Hz. Integrating one of the K-array subwoofers KU family, powered by a KA amplifiers set with specific presets optimized for the Vyper assures excellent coverage of the entire musical frequency range. All Vyper components are designed by the K-array R&D department and are custom made under the K-array quality control system.

### Pure Array Technology (PAT)

Composed of closely-spaced, full-range sound sources, our line array elements feature Pure Array Technology. With no crossover and no reflex, a perfect phase response is achieved in both the near and far fields, making these columns the perfect solution to cover long distances uniformly. The narrow vertical coverage minimizes the sound spill towards the ceiling and the floor, thus increasing the intelligibility in highly reverberant environments.
